- Methane concentrations ~150-200 ft E of SS-25 have been decreasing since 02/26/16 but are still elevated (up to 28 ppm)
- Methane levels immediately W and NW of well SS-25 have been decreasing during the past few days but are still substantially higher than background
- SCAQMD inspectors used a portable TVA-1000 monitor to confirm these findings and complement the LICOR data
- Videos were taken with FLIR cameras to identify the presence of natural gas
