@SouthCoastAQMD    

**FOR IMMEDIATE RELEASE:** August 24, 2019

## **South Coast AQMD Continues Salton Sea Odor Advisory**

**Valid Saturday August 24, 2019 through Monday August 26, 2019**

*This advisory is in effect through Monday Afternoon. South Coast AQMD will issue an update if additional information becomes available.*

The South Coast Air Quality Management District has extended an odor advisory until Monday for the Coachella Valley due to elevated levels of a gas that smells like rotten eggs. That gas, hydrogen sulfide, is associated with natural processes occurring in the Salton Sea.

Over the past two weeks, hydrogen sulfide concentrations have been elevated immediately downwind of the Salton Sea. On Saturday morning hydrogen sulfide concentrations were up to 76 ppb at a monitor close to the shore, in an area with little population, and 35 ppb at a monitor in Mecca. The highest concentrations at both monitors have occurred when winds were blowing out of the south, especially during the morning hours. Winds from the south are expected during daylight hours on Sunday and Monday. If elevated hydrogen sulfide emissions from the Salton Sea continue, elevated concentrations are expected during the day at both the Near-Shore and Mecca Community sites, with peak concentrations occurring in the morning.

The state standard for outdoor levels of hydrogen sulfide is 30 parts per billion averaged over one hour. At that level, most individuals can smell the odor and some may experience symptoms such as headaches and nausea. However, the symptoms associated with this level of exposure are temporary and do not cause any long-term health effects. Humans can detect hydrogen sulfide odors at extremely low concentrations, down to a few parts per billion.

South Coast AQMD monitors hydrogen sulfide at two locations in the southeastern Coachella Valley- one very close to the Salton Sea and the other in the community of Mecca. There is increased potential for Salton Sea odors to occur as the winds shift, especially in the summer months in the early morning and late afternoon, or as thunderstorms occur over the southwestern U.S. deserts.

Areas of direct impacts and unhealthful air quality may include portions of:

- Riverside County: Coachella Valley (Area 30)

- More health information on hydrogen sulfide can be found at the following link: <http://www.atsdr.cdc.gov/toxguides/toxguide-114.pdf>
- Visit [saltonseaodor.org](http://saltonseaodor.org) for current hydrogen sulfide (H<sub>2</sub>S) monitored values in the Salton Sea area or to sign up for H<sub>2</sub>S alerts.
