South Coast AQMD Continues Smoke Advisory Due to Apple Fire North of Cherry Valley

Valid Friday August 07, 2020 through Saturday August 08, 2020

This advisory is in effect through Saturday afternoon. South Coast AQMD will issue an update if additional information becomes available.

A fire named the Apple Fire is burning north of Cherry Valley in Riverside County. As of 1:15 PM on Friday, the burn area was over 29,000 acres with 30% containment. Current information on the Apple Fire can be found on the Incident Information System (InciWeb) at

<https://inciweb.nwcg.gov/incident/6902/>.

Past and Current Smoke Impacts

The Apple Fire continues to produce smoke this afternoon based on satellite imagery, webcam imagery and social media posts. Smoke production has increased today due to firefighting operations. Smoke production tends to be higher in the early morning, decreasing later in the morning. A low-cost sensor in Desert Hot Springs has reached the **Unhealthy for Sensitive Groups** category early on Friday morning.

As of Friday afternoon, PM2.5 levels at all regulatory monitors and low-cost sensors in the Coachella Valley and San Gorgonio Pass are in the **Good to Moderate** category. Visit

<https://www.aqmd.gov/aqdata> to view current air quality conditions.

Forecasted Smoke Impacts

- San Gorgonio Pass (Area 29): most of the smoke impacts will continue to be concentrated at higher elevations near the fire. It is possible that some smoke may be transported down from the higher elevations in the overnight hours. Winds from the west in the proximity of the fire

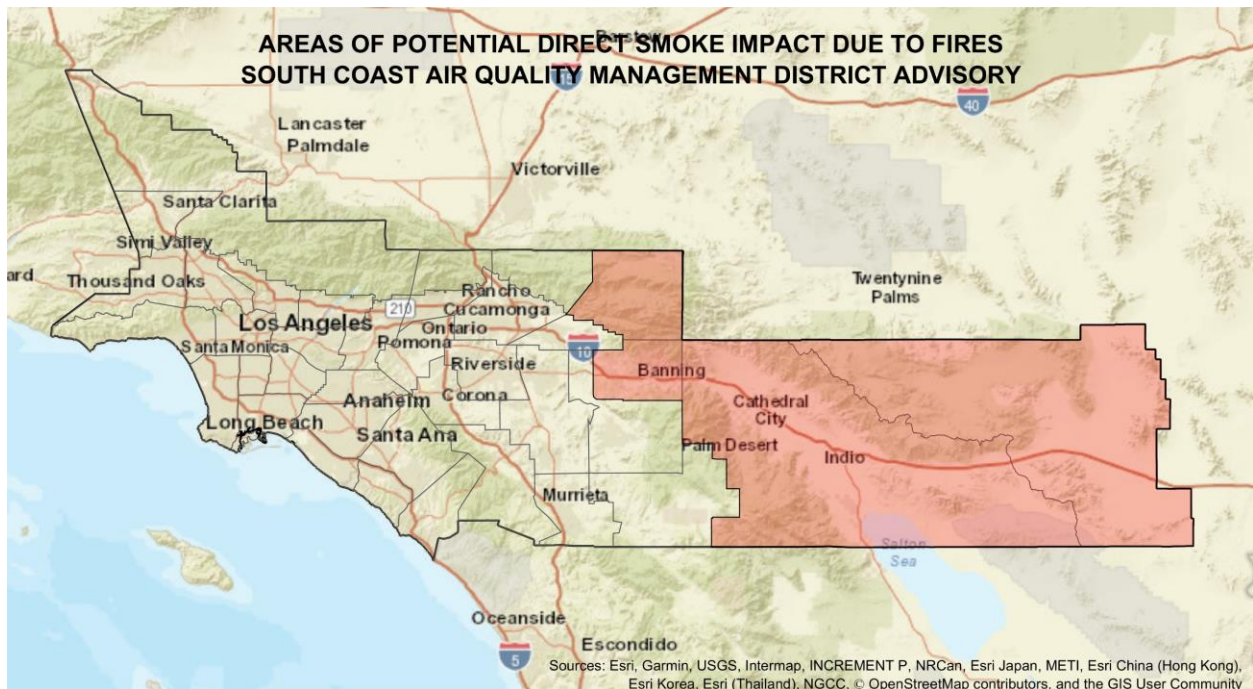

are expected to continue at least for the next several days. Therefore, significant smoke impacts are not expected west of Banning.

- East San Bernardino Mountains (Area 38): smoke impacts will continue near the fire and towards the east. While conditions may change, significant smoke impacts are not likely in Big Bear, based on model predictions.
- Coachella Valley (Area 30): minor smoke impacts are expected to continue in the Northern Coachella Valley especially in the overnight hours when the plume is concentrated closer to the ground. Air quality will be a strong function of how much smoke gets transported north through the Morongo Valley and Yucca Valley vs. how much smoke gets transported south into the Coachella Valley. Model predictions indicate that smoke transport to the south will be minimal.
- Impacts in Eastern Riverside County (Area 31): minor smoke impacts are expected to persist in this region and throughout Joshua Tree National Park.

Overall, meteorological conditions may bring smoke and ash into portions of the San Gorgonio Pass, the eastern San Bernardino Mountains, the Coachella Valley, and Eastern Riverside County. **Unhealthy for Sensitive Groups** or higher AQI levels are possible in areas of direct smoke impacts. However, smoke impacts are anticipated to decrease significantly starting tomorrow.

Areas of direct impacts and poor air quality may include portions of:

- **Riverside County:** San Gorgonio Pass (Area 29), Coachella Valley (Area 30), East Riverside County (Area 31)
- **San Bernardino County:** East San Bernardino Mountains (Area 38)

In any area impacted by smoke: If you smell smoke or see ash due to a wildfire, limit your exposure by remaining indoors with windows and doors closed or seeking alternate shelter, and avoiding vigorous physical activity. For more tips on protecting yourself during a wildfire, see South Coast AQMD's Wildfire Smoke & Ash Health & Safety Tips page: <http://www.aqmd.gov/wildfire-health-info-smoke-tips>
