## South Coast AQMD Issues Windblown Dust Advisory for the Coachella Valley

**Valid: Saturday, March 5, 2022**

*This advisory is in effect through 10 p.m. Saturday. South Coast AQMD will issue an update if additional information becomes available.*

A PM10 Dust Advisory is in effect from 1AM through 10PM Saturday due to predicted high winds in the Coachella Valley. As of Friday morning, the National Weather Service (NWS) has posted a Wind Advisory for this area due to a Pacific storm that will bring high winds and light drizzle to the area. For information regarding the NWS warnings, please visit the NWS San Diego (<https://www.weather.gov/sdx/>) website.

High winds may lift dust and soil and lead to poor air quality. Depending on the amount and timing of rain, air quality categories will vary from **Moderate** to **Unhealthy for Sensitive Groups** or higher. Air quality can vary hour by hour and by location depending on wind and rain.

In areas directly impacted by high levels of windblown dust, limit your exposure by remaining indoors with windows and doors closed and avoiding vigorous physical activity. Run your air conditioner or an air purifier. If temperatures allow, avoid using whole house fans or swamp coolers that bring in outside air.

Exposure to high particle pollution levels can cause serious health problems, including asthma attacks, heart and lung disease symptoms, and increased risk of respiratory infections. People with heart or lung diseases should follow their doctor's advice for dealing with episodes of unhealthy air quality. Children, older adults, and people with respiratory or heart disease should avoid prolonged exposure and strenuous activities when particle pollution levels are high.

Areas of direct impacts and poor air quality may include portions of:

- **Riverside County:** Coachella Valley (Area 30)

**In areas directly impacted by windblown dust:** Limit your exposure by remaining indoors with windows and doors closed and avoiding vigorous physical activity.
