## **South Coast AQMD Extends Windblown Dust Advisory for the San Gorgonio Pass and Coachella Valley Areas**

***Valid: Wednesday, May 10 through Thursday, May 11, 2023***

*This advisory is in effect through Thursday at 3 a.m. South Coast AQMD will issue an update if additional information becomes available.*

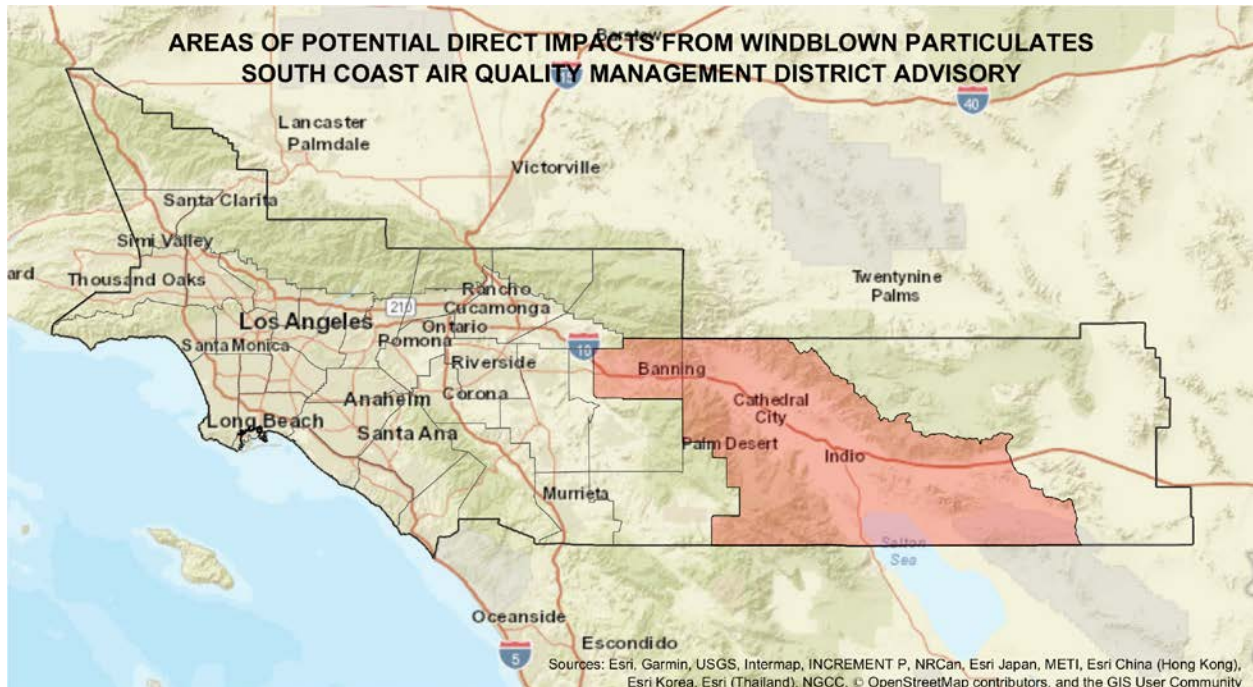

A PM10 Dust Advisory has been extended through 3 a.m. on Thursday due to strong winds in the San Gorgonio Pass and Coachella Valley. High winds can lift dust and soil and lead to poor air quality. Blowing dust during this event may result in Air Quality Index (AQI) levels that are **Unhealthy** or worse. Air quality can vary hour by hour and by location depending on wind conditions.

In areas directly impacted by high levels of windblown dust, limit your exposure by remaining indoors with windows and doors closed and avoiding vigorous physical activity. Run your air conditioning or an air purifier, if available, and avoid using whole house fans or swamp coolers that bring in outside air.

Exposure to high particle pollution levels can cause serious health problems, including asthma attacks, heart and lung disease symptoms, and increased risk of respiratory infections. People with heart or lung diseases should follow their doctor's advice for dealing with episodes of unhealthy air quality. Children, older adults, and people with respiratory or heart disease should avoid prolonged exposure and strenuous activities when particle pollution levels are high.

Areas of direct impacts and poor air quality may include portions of:

- **Riverside County:** San Gorgonio Pass (Area 29), Coachella Valley (Area 30)

**In areas directly impacted by windblown dust:** Everyone should avoid any vigorous outdoor or indoor exertion; people with respiratory or heart disease, the elderly, and children should remain indoors.
